Assess how effective your presentation technique(s) were in representing the data collected in this enquiry	Outline one limitation of a primary data collection techniques used	Identify two risks that you needed to manage during your fieldwork	Explain the disadvantage(s) of the location(s) used for your physical fieldwork enquiry	With reference to your methods, results and conclusions, suggest how one of your geographical enquiries could be improved.
Explain why your enquiry question was a suitable topic for physical fieldwork	For one of your geographical enquiries, to what extent were the results of this enquiry helpful in developing your understanding of the topic or environment investigated	Outline two strengths of one of the data presentation techniques that you used	Evaluate the data presentation technique(s) used in your physical fieldwork enquiry	
		Assess the role of data sampling within your physical fieldwork enquiry	Describe the purpose of your physical fieldwork enquiry	Explain the advantage(s) of the location(s) used for your fieldwork enquiry
For one of your geographical enquiries, to what extent were the results of this enquiry helpful in reaching a reliable conclusion to your original question		Identify two data collection techniques that could be used to carry out a geographical investigation in a physical environment		With reference to the aim of your physical enquiry, to what extent were the primary data collection techniques effective
Compare the differences between primary and secondary data collection techniques	Suggest two pieces of advice that should be given to students in order to reduce potential risks when carrying out a physical geographical enquiry		Outline an alternative way of sampling study sites and state an advantage of your method	Describe the characteristics of your study area for physical fieldwork
To what extent were the data collection techniques useful in satisfying the original aim(s) of the enquiry	Using specific examples from your fieldwork enquiry, describe and explain the risk assessment you undertook	With reference to your data presentation(s) analysis and conclusion, to what extent were these helpful in evaluating your fieldwork enquiry		Assess how effective your data collection techniques were in answering your original aim(s) of the enquiry
Identify two data collection techniques that could be used to carry out a geographical investigation in a physical environment	Justify one primary data collection method used in relation to the aim(s) of your physical geography enquiry		Justify the location(s) used for your physical fieldwork enquiry	
	Justify one secondary data collection method used in relation to the aim(s) of your physical geography enquiry	Explain the geographical concepts, processes or theories that underpinned your physical fieldwork enquiry	Describe the geographical concepts, processes or theories that formed the basis of your physical fieldwork enquiry	
With specific reference to your data collection techniques, describe and explain how your physical enquiry could be improved		Justify one statistical technique used to analysis your results	With specific reference to your analysis, describe and explain further enquiry opportunities arising from your enquiry	
Explain why a pebble size count may not be accurate	With reference to examples from your physical fieldwork, explain differences between qualitative and quantitative data collection		Evaluate the methods used to collect data in your physical fieldwork enquiry	Justify a sampling technique used to collected data in your physical enquiry
To what extent do your results meet the original aims of your physical fieldwork enquiry			With reference to the aim of your physical enquiry, describe one method of secondary data collection

Assess how effective your presentation technique(s) were in representing the data collected in this enquiry	Outline one limitation of a primary data collection techniques used	Identify two risks that you needed to manage during your fieldwork	Explain the disadvantage(s) of the location(s) used for your human fieldwork enquiry	With reference to your methods, results and conclusions, suggest how one of your geographical enquiries could be improved.
Explain why your enquiry question was a suitable topic for human fieldwork	For one of your geographical enquiries, to what extent were the results of this enquiry helpful in developing your understanding of the topic or environment investigated	Outline two strengths of one of the data presentation techniques that you used	Evaluate the data presentation technique(s) used in your human fieldwork enquiry	
Suggest reasons for different traffic count results between the morning and afternoon		Assess the role of data sampling within your human fieldwork enquiry	Describe the purpose of your human fieldwork enquiry	Explain the advantage(s) of the location(s) used for your fieldwork enquiry
For one of your geographical enquiries, to what extent were the results of this enquiry helpful in reaching a reliable conclusion to your original question	Identify two data collection techniques that could be used to carry out a geographical investigation in a human environment		With reference to the aim of your human enquiry, to what extent were the primary data collection techniques effective	
Compare the differences between primary and secondary data collection techniques	Suggest two pieces of advice that should be given to students in order to reduce potential risks when carrying out a human geographical enquiry		Outline an alternative way of sampling study sites and state an advantage of your method	Describe the characteristics of your study area for human fieldwork
To what extent were the data collection techniques useful in satisfying the original aim(s) of the enquiry	Using specific examples from your fieldwork enquiry, describe and explain the risk assessment you undertook	With reference to your data presentation(s) analysis and conclusion, to what extent were these helpful in evaluating your fieldwork enquiry	Assess how effective your data collection techniques were in answering your original aim(s) of the enquiry	
With reference to the aim of your human enquiry, to what extent were the secondary data collection techniques effective	Justify one primary data collection method used in relation to the aim(s) of your human geography enquiry		Justify the location(s) used for your human fieldwork enquiry	
Identify two data collection techniques that could be used to carry out a geographical investigation in a human environment	Justify one secondary data collection method used in relation to the aim(s) of your human geography enquiry	Explain the geographical concepts, processes or theories that underpinned your human fieldwork enquiry		Describe the geographical concepts, processes or theories that formed the basis of your human fieldwork enquiry
Identify two data collection techniques that could be used to carry out a geographical investigation in a human environment	With specific reference to your data collection techniques, describe and explain how your human enquiry could be improved	Justify one statistical technique used to analysis your results		With specific reference to your analysis, describe and explain further enquiry opportunities arising from your enquiry
Explain why a pedestrian count may not be accurate	With reference to examples from your human fieldwork, explain differences between qualitative and quantitative data collection		Evaluate the methods used to collect data in your human fieldwork enquiry	Justify a sampling technique used to collected data in your human enquiry
To what extent do your results meet the original aims of your human fieldwork enquiry			With reference to the aim of your human enquiry, describe one method of secondary data collection
