

October 2017

STEM presentation – a career in engineering design

Is your child interested in a career in engineering and wants to find out more?

Date: Tuesday 5 December 2017

Time: 3-5pm

Place: F7

Refreshments will be provided

It is an exciting time for railways - a new generation of Inter City Express trains are soon to take to the tracks in the capitals and other amazing trains are planned.

One of our STEM Ambassadors is offering to deliver a presentation, intended to give students an insight into the design work that has gone into creating these fantastic new trains, which has necessitated the use of extensive and advanced engineering technology. Hopefully this talk will encourage young potential engineers to pursue a career in engineering.

The presentation, intended to take about 2 hours, will focus on the coach design and involve student interaction and practical demonstrations. It will include information on how a young person could get involved in engineering.

Places are limited to 30 students so please complete the reply slip and return to main reception to book a place.

Yours sincerely

Dr G A Heald
Curriculum team leader for science
